## JCMLoad 10 Tonne Pad Eye Tester

- Adjustable legs that can be adjusted for height and distance (Vertical 350mm travel and Horizontal 55mm travel) gives the operator much more flexibility when testing pad eyes that are on/ surrounded by uneven surfaces.
- Once all the adjustments have been made to test the pad eye, a check that the frame is level is imperative to ensure a centralised pull. Which is why we have included a spirit level.
- To allow for easy adjustment of the legs a spanner is provided to make any adjustments.

Weight: 15Kg's

[illegible]
